

NEROX PURE WATER FILTER

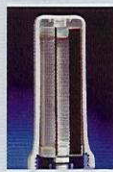

Clearly the best drinking water filter

- 100 % bacteria filtration during the filter's lifetime
- Capacity for over 25,000 litres
- Clears and freshens water
- Flow rate approx. 4 litres/ min/4 bars

Drink just the water, not the bacteria, or iron, or copper, or...

The Nerox 2000 is a drinking water filter which guarantees 100 % bacteria-free, clean, fresh drinking water in domestic kitchens, summer cottages, caravans and boats wherever a tap exists. The Nerox 2000 doesn't use electricity or contain chemicals, silver or iodine.

The best filter is the simplest

The Nerox 2000 is based on a unique membrane which protects the inner part of the filter, the activated carbon cartridge. The membrane works as a sieve. The pores are so small that only pure water and minerals important to your health pass through. (There are 130,000,000 pores per square cm!) Activated carbon filters which don't have the protecting Nerox membrane are an ideal place for bacteria, algae and parasites to grow. That's why their filtering capacity rapidly diminishes. With Nerox 2000 Pure Water Filters all bacteria remains on the outer surface of the membrane where they can be easily washed away. This lengthens the period during which the activated carbon can be used, and it is absolutely safe to use the filter throughout its entire lifetime.

Cleanliness equals health

Nerox Filter Ltd is a scientific, research and development company which is continuously developing water filters based on the Nerox membrane. The company is committed to bringing fresh drinking water to everyone in the world wherever they are. Humanitarian aid organisations have used Nerox technology for years. Filters are used in disaster areas and in places where it is difficult to find daily water.

Every single Nerox 2000 Pure Water filter is individually tested and certified before it is packed. The Nerox membrane ensures that every single drop of water that passes through it is clean, healthy and bacteria-free.

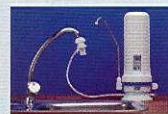

With the membrane and the activated carbon, the Nerox 2000 Pure Water Filter will filter:

• E-coli bacteria	100 %	• zinc	100-98 %
• algae	100 %	• aluminium	100-97 %
• parasites	100 %	• turbidity	97-90 %
• iron	100-98 %	• colour	97-80 %
• copper	100-97 %		

Two models available:

The Nerox 2002 UC (Under Counter) is installed in a pressurised water system. It fits onto the cold water pipe under the kitchen sink. A tap is included with the pack which can be installed onto the counter surface. The Nerox 2001 CT (Counter Top) is installed directly onto a tap and it is easy to move from one place to another.
